Research Insight Helps Administrators Strengthen Their Research Enterprise

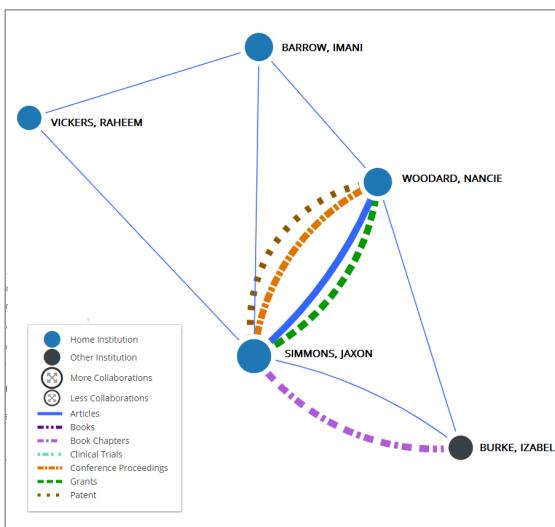

Administrators can use Research Insight to build limited submission grant teams, help with strategic planning, identify talent for specific initiatives, and analyze the efficacy of cross-disciplinary teams. Research Insight improves the effectiveness of administrators in building strong research institutions.

Administrator Challenges

Research institutions compete for millions of dollars from federal agencies and private funding sources. As funding decreases and more institutions vie for grants, competition is intensifying.

Increasingly, funding is awarded to teams, making the formation of expert teams critical.

However, data on faculty members' expertise has been lacking, making it difficult for administrators to identify subject matter experts and form collaborative teams.

The Collaborative Network is part of Research Insight and displays shared research collaborations.

Research Insight is a Comprehensive Solution

Research Insight supports administrators, deans, and department chairs, helping them to discover relevant funding opportunities, find subject matter experts, form multidisciplinary teams, and win more grants.

Research Insight Helps Administrators

Find Subject Matter Experts

Within an institution or externally. Powerful algorithms scan faculty members' research to identify scholars with expertise on a specific topic.

Build multi-disciplinary teams

Supports faculty retention and career progression. Provides "what if" scenario modeling.

Identify research product faculty

In relation to discipline peers as well as under recognized faculty.
